Community Impact Report
2022
Comanche County Memorial Hospital

From our CEO

Since 1951, CCMH has provided services to Southwest Oklahoma with a commitment to healthcare leadership and excellence. The hospital is licensed for 265 beds. CCMH is the first and only to provide robotic surgery with the new Da Vinci Xi Surgical System and also the only hospital in the region offering the Mako robotic arm-assisted joint replacement system for total hip, total and partial knee replacement. CCMH is the only comprehensive heart program in Southwest Oklahoma and has provided heart services for over 25 years, including advanced cardiovascular surgery and is designated as an Advanced Primary Stroke Center. CCMH is proud to have the area's first and only Neonatal Intensive Care Unit. Our McMahon Tomlinson Nursing and Rehabilitation Center provides long-term residential care and a skilled nursing unit with 142 beds. CCMH provides virtually any service that could be needed by over 150 providers in the Memorial Medical Group and Lawton Community Health Centers. Convenient locations across Southwest Oklahoma allows you and your family to stay close to home for your advanced medical care.

Brent Smith

During these challenging times, our team member's dedication to safety and caring does not go unnoticed. Our team and their families make extraordinary sacrifices to do what needs to be done and I am reminded we have chosen to work in healthcare because it is a true calling. Our choice to care for others is helping to make a lasting difference in countless families' lives every day. CCMH is Your Community Hospital!

Our first son was born before the NICU at CCMH was even created, so he was born here but then MediFlighted to OKC. I got to touch his hand before he left then I had to wait two days to hold him.

Our second son was born a month early, but thankfully the NICU at CCMH was open by this time. Because of this, I got to hold him about 12 hours after he was born instead of two days! Being at CCMH also meant my husband and I were able to stay close to home, so we could spend time with him in the NICU and also spend time at home with our three year old. I am so thankful for the NICU at CCMH, because having baby in the NICU is hard enough, I can't imagine how it would have been to have one baby in OKC and one kiddo at home!

Meagan Garibay, RN
Mother of NICU patient

"Being a former professional football player I've had surgeries all over the country. When I discovered I needed surgery to repair a hernia I debated going back to Dallas to have it done, thinking they would provide better care. I decided to practice what I preach about staying local and I couldn't be happier with my decision. CCMH made me feel completely at ease and comfortable throughout every step of my care from registration, pre-op, surgery and then recovery. The staff, nurses and Dr. Morgan who performed the surgery all provided exceptional care during my stay. The hospital and my room were very clean and they provided me with every amenity to make my time as pleasant as possible even making sure my blankets were warm. I definitely would recommend CCMH services to my family and friends!"
